Hang Dai

March 2026

Beijing, China
daihang@stu.pku.edu.cn

Education

2023–Present **B.S. at Peking University**, *Beijing*
- Major: Information and Computing Science
- GPA (to date): 3.72/4.0
- Expected Graduation: June 2027
- Research Interests: Computer Graphics, 3D Reconstruction, Digital Art Creation

Technical Skills

Programming	Python, C++
Graphics Tools	3D visualization, digital modeling, rendering pipelines
Languages	Mandarin (Native), English (CET6 617, TOEFL 110/120)

Research Projects

CVPR 2026 **FreeArtGS: Articulated Gaussian Splatting Under Free-moving Scenario**, *As first author*
- Developed methods for reconstructing everyday objects for digital visualization.
- Built pipelines for converting image sequences into 3D models for virtual display.
- Focused on improving visual realism and geometric consistency in rendered scenes.

Experience

2024 Summer–Present **Research Intern, Hyperplane Lab**, *Supervised by Prof. Hao Dong*
- Worked on digital visualization and 3D modeling for virtual environments.
- Built software pipelines for processing image data into visual assets.
- Contributed to scene modeling, lighting, and environment rendering workflows.

Awards

- Peking University Merit Student Award (Academic Year 2023–2024)

Research Interests

- **Computer graphics and digital visualization**: studying methods for generating visually realistic 3D content from image data, with emphasis on geometric consistency and visual quality.
- **3D modeling and rendering techniques**: developing techniques for converting image sequences into structured 3D models, including mesh generation, texture mapping, and lighting simulation.
- **Image-based 3D reconstruction**: exploring methods that transform multiple photographs into detailed 3D representations for digital content creation and visualization.
- **Digital content pipelines**: designing workflows for processing visual data into usable assets for visualization, animation, and virtual display.
